- Relapse is common
- Housing is critical
- Individualized treatment to client

Characteristics-

Gender of All Participants

for

All Participating Clients

Contra Costa Project

Racial/ethnic Composition

Racial/ethnic Composition

San Diego Project

Racial/ethnic Composition

Santa Cruz Project

Racial/ethnic Composition

Diagnosis at Admission

- Most Frequent Schizophrenic or mood disorder
- Alcohol most frequent drug at 2
- Cocaine most frequent at 1
- Polydrug most frequent at 1
- Alcohol a problem at all (first or second)

Clinical Data

- 5 Forms at admission
- Similar scores at all projects
- Just admission scores
- Change over time is key

Kennedy Axis V

- Similar results at all 4 sites
- Psychological functioning lowest at 2 sites
- Substance abuse lowest at 1
- Substance abuse & Psych tied at 1 site

CA-QOL at Admission

- *Clients least satisfied w/finances*
- *Clients most satisfied w/safety*
- *All sites majority of clients report adequate \$ for food*
- *3 Sites clients report not enough \$ for clothing, housing, local travel, etc.*
- *San Diego clients had enough for housing & local travel yet least Spending \$\$*

Victims of Violent Crime

Victims of Non Violent Crime

Addiction Severity Index

- Scores similar at all 4 projects
- Surprisingly low scores on ASI for drug & Alcohol (low score= little or not problems)
- All projects score severest problem is w/employment
- least problematic is drug

Explaining the ASI

- Time Frame of Questions (last 30 days)
- Denial common to substance abusers
- Self report not accurate w/this pop
- Form may not be appropriate for this pop

Basis-32

- *Clients at all 4 sites gave themselves positive ratings (meaning little to no difficulty) on psychosis and on impulsive/addictive difficulties*
- *Most difficulties for all 4 projects was in area of depression/anxiety*
- *Positive ratings for psychosis & addiction may be explained by same items as ASI*

SF - 12

- *Clients at 3 projects gave good ratings to Physical health*
- *Clients at 3 projects gave lower, but still high ratings to mental health*
- *San Diego clients were much lower on both scales (maybe a calculation problem)*

Quantitative Data - Case Studies

- Case Histories - Peoples stories
- Faces behind the numbers
- *6 cases, 6 very different people*

Qualitative Data Staff Survey

- *All staff given survey in late summer 1999*
- *Staff well educated & well trained*
- *81% had MH exp*
- *48% had Sub. exp*
- *81% had DD exp*
